How do you think of test cases?

```
1. Understand the problem - This means look at input constraints, and the output
format.
2. How to approach it - Divide the input space into partitions. Create decision
tables.
3. Think of Edge, Boundary and Special Cases.
```

Compile code

```
gcc filename.c -o output_file_name
./a.out ( for linux )
./a.exe ( for windows )
```
